

*Office of  
A. T. Doremus,  
State Engineer  
Salt Lake City, Utah.*

Memorandum of Agreement.

The following memorandum is hereby mutually agreed upon by the parties hereto as the substance of an understanding between them relative to the regulation and apportionment of the water of the Spanish Fork River for and during the season of 1904.

First. The State Engineer is to assume absolute control of the water of the river and require, under the provisions of law, that a proper measuring device be placed in every ditch and canal that is entitled to take its water supply from the river or any of its branches and through his deputy to apportion the water among said canals and ditches according to their rights, respectively, as decreed by the Fourth Judicial District Court on April 20, 1899.

Second. The expenses incurred by the State Engineer in the control and apportionment of the water as aforesaid are to be paid jointly by the parties hereto; that is to say, one-half of said expenses to be paid by the State Engineer's office and one-half to be paid by the following named corporations, to-wit: Spanish Fork City, Spanish Fork West Field Irrigation Company, Spanish Fork South Field Irrigation Company, Spanish Fork Southeast Irrigation Company, Salem Irrigation and Canal Company, Spanish Fork East Bench Irrigation and Manufacturing Company, and the Lake Shore Irrigation Company; said expenses to be paid monthly upon a statement to be made by the State Engineer showing each item of expense separately for the preceding calendar month, and the amount thereof to be paid not later than the 10th day of the succeeding month, one-half as aforesaid. The mon-

MICROFILMED

thly expense is estimated at \$150.00, but payment is to be made of the actual expense as shown by said monthly statement, whether the same be more or less than the estimated amount.

Third. The State Engineer is to assume control of the water of said river at once and to continue to control and apportion the same until the use of water for irrigation shall have entirely ceased for the season.

Fourth. The watermasters of the several named corporations are to render at all times any necessary assistance in the matter of regulating and apportioning the flow of water as may be required by the State Engineer or his deputy.

In witness whereof the above named parties have each subscribed their names hereto this 10<sup>th</sup> day of May, 1904.
